Administrator	IPConcept (Luxemburg) S.A.
Custodian Bank	DZ PRIVATBANK S.A.
Fund Volume	51,331,675.25 USD

Source: IPConcept (Luxemburg) S.A. Date: 30.11.2022

Monthly Commentary

Investors continued to be concerned about inflation and further central bank tightening at the beginning of the month. After the release of US inflation data for October, where US CPI Core inflation rates have increased by 6.3% (Y-o-Y) and thereby less than anticipated, investor sentiment improved significantly. Both equity and bond markets have rallied subsequently, as US inflation rates may have peaked. The price of Brent crude oil decreased from \$ 94.83 to \$ 85.43. In a positive market environment energy as well as transport-aviation stocks have performed strongly, whereas the marine transportation segment was mixed. Crude tanker rates have increased further, averaging \$ 88k throughout the month for VLCCs. Dry bulk rates have decreased from \$17k/day to 13k/day (Capesize). The Shanghai Containerized Freight Index (SCFI) by 28% from a month ago and down 86% year on year. The overall fund performance (USD share class) was positive. Short positions had a negative contribution.

Investment Strategy

The Seahawk Equity Long Short Fund is a global long/short equity fund. The Fund's objective is to achieve superior absolute risk-adjusted returns over the long term. Focusing on energy and transportation sectors and other related industries Seahawk employs a fundamental approach to seek out individual long and short opportunities. The fund invests in equities as well as secured and unsecured fixed income instruments opportunistically. The fund aims at long term capital appreciation with a strong focus on risk management.

Footnotes

(1) The performance-related remuneration is based on the past financial year. The key fund data is determined on the basis of daily information.

No fund data is determined for funds launched less than one year ago.

(2) Past performance is not a reliable indicator of future trends. Performance is determined using the BVI method (without taking front-end loads into consideration). With an investment amount of EUR 10,000 over a five-year investment period and a 5% front-end load, the front-end load amounting to EUR 500 and any additional custodian fees incurred would be deducted from the investment result during the first year. Any individual custodian costs incurred may be deducted from the investment result over subsequent years. Performance is determined using the BVI method. The fund performance in line with the BVI method is the percentage change in the unit value between the beginning and the end of the calculation period. The BVI fund category is derived from the fine categorisation of the BVI.

(3) The top 5 holdings are understood to have taken derivatives into account. All information on the asset-class shares (large cap, medium cap and small cap) relates to the Fund's assets. All information on the asset-class fixed income relates to the Fund's assets.

(4) Risk information: On account of its composition/the techniques used by fund management, the investment fund shows an increased level of volatility. This means that the unit prices may fluctuate significantly upwards or downwards within short time periods.

Under normal market conditions, the key performance data and risk-adjusted performance data refer to a period covering the past three years. With funds launched between one and three years ago, the key data refers to the period since the fund's launch.

Volatility: Volatility normally means the fluctuation risk of, for instance, a fund. The standard deviation of the performance figures over the period under consideration serves as the mathematical basis; when annualised, this is described as volatility. Volatility of 5% with an average annual performance of 7% means that the next annual performance will (with a 68.27% probability rate) probably be between 2% (=7%-5%) and 12% (=7%+5%).

Sharpe ratio: The Sharpe ratio is the difference between the performance achieved per annum and the risk-free interest rate (Deutsche Bank USD 1 M LIBOR TR Index), divided by the volatility. Therefore, it can be interpreted as the risk premium per unit measured against the overall risk entered into. As a general rule, the higher it is, the better (high performance with a low risk). Owing to their relative size, Sharpe ratios of various portfolios can be compared with one another.
