

Seahawk Equity Long Short Fund

Date: 30.08.2024

Investment Strategy

The Seahawk Equity Long Short Fund is a global long/short equity fund. The Fund's objective is to achieve superior absolute risk-adjusted returns over the long term. Focusing on energy and transportation sectors and other related industries Seahawk employs a fundamental approach to seek out individual long and short opportunities. The fund invests in equities as well as secured and unsecured fixed income instruments opportunistically. The fund aims at long term capital appreciation with a strong focus on risk management.

Footnotes

(1) The performance-related remuneration is based on the past financial year. The key fund data is determined on the basis of daily information.

No fund data is determined for funds launched less than one year ago.

(2) Past performance is not a reliable indicator of future trends. Performance is determined using the BVI method (without taking front-end loads into consideration). With an investment amount of EUR 10,000 over a five-year investment period and a 5% front-end load, the front-end load amounting to EUR 500 and any additional custodian fees incurred would be deducted from the investment result during the first year. Any individual custodian costs incurred may be deducted from the investment result over subsequent years. Performance is determined using the BVI method. The fund performance in line with the BVI method is the percentage change in the unit value between the beginning and the end of the calculation period. The BVI fund category is derived from the fine categorisation of the BVI.

(3) The top 5 holdings are understood to have taken derivatives into account. All information on the asset-class shares (large cap, medium cap and small cap) relates to the Fund's assets. All information on the asset-class fixed income relates to the Fund's assets.

(4) Risk information: On account of its composition/the techniques used by fund management, the investment fund shows an increased level of volatility. This means that the unit prices may fluctuate significantly upwards or downwards within short time periods.

Under normal market conditions, the key performance data and risk-adjusted performance data refer to a period covering the past three years. With funds launched between one and three years ago, the key data refers to the period since the fund's launch.

The Seahawk Equity Long Short Fund is an actively managed fund which is not managed in reference to any benchmark.

Volatility: Volatility normally means the fluctuation risk of, for instance, a fund. The standard deviation of the performance figures over the period under consideration serves as the mathematical basis; when annualised, this is described as volatility. Volatility of 5% with an average annual performance of 7% means that the next annual performance will (with a 68.27% probability rate) probably be between 2% (=7%-5%) and 12% (=7%+5%).

Sharpe ratio: The Sharpe ratio is the difference between the performance achieved per annum and the risk-free interest rate (Deutsche Bank USD 1 M LIBOR TR Index), divided by the volatility. Therefore, it can be interpreted as the risk premium per unit measured against the overall risk entered into. As a general rule, the higher it is, the better (high performance with a low risk). Owing to their relative size, Sharpe ratios of various portfolios can be compared with one another.

General Market Review

In early August US-recession fears have resurfaced as softer-than-expected economic growth data was followed by a weak employment report. As the Bank of Japan (BoJ) has decided to raise its key benchmark rate the Japanese Yen continued to increase against the US-Dollar thereby forcing investors to unwind their FX carry-trade positions. This has led to an 8%-correction of the S&P500 in the beginning of the month. Subsequently, better than expected economic data led to a V-shaped turnaround offsetting losses entirely in the larger cap stock market segments. Defensive stocks were still resilient throughout the month whereas cyclical stock market sectors have shown a significant underperformance.

The Bank of England (BoE) cut its key interest rate from 5.25% to 5%, which was the first rate cut after the hiking cycle that began in December 2021. Otherwise, market participants followed the statements made by global central bankers at the renowned annual meeting in Jackson Hole. FED-chair Powell has reaffirmed markets that interest rate cuts were imminent as the labor market has cooled considerably.

US economic data was weaker as non-farm payrolls increased by only +114k in July from +206k in June. The unemployment rate rose from 4.1% in June to 4.3% in July still following a slightly increasing trend for a few months now.

In the Eurozone unemployment rates were stable at 6.4% from 6.5% in the prior month.

In the US, consumer price inflation further continued to decrease as headline inflation was at +2.9% (y-o-y) and core inflation at +3.2% (y-o-y) for the month of July versus previous readings of +3.0% and +3.3%.

In the Eurozone, consumer price inflation figures in July came in unchanged as headline inflation was again at +2.6% and core inflation at +2.9% (June revised: +2.9%).

US 10-year treasury yields decreased from 4.0% to 3.9% at the end of August, whereas 10 year-German government yields remained at 2.3%.

The MSCI World Index rose by +2.6% (USD den.) and the MSCI Europe Index increased by +1.6% (EUR den.).

Energy and Transportation

The price of Brent oil fell from \$ 80.7 to \$ 78.8 at the end of the month. Despite ongoing tensions in the Middle East market participants have downplayed political risks as there has been no major supply disruption. As investors became more concerned about the potential demand outlook for oil the Stoxx 600 Oil & Gas Index (Euro denom.) fell by -3%

On the other hand, the S&P Global Clean Energy Sector Index was able to partly recover from the previous month losses. The index increased by +1.4% in August. With that the renewable energy segment is still down by -7.5% year-to-date.

Transportation segments were mixed during the month. The DJ Transportation Average Index was flat at the end of the month. The aviation segment was weak. Within the airline segment airfares are expected to fall in the winter season. At the same time labor costs continue to be a headwind. The US Global Jets Index dropped by -2.0%.

The Russell 2000 Marine Transportation Index has decreased by -3.3%. Freight rates have been mixed. Despite the ongoing disruptions in the Red Sea container freight fell by -11% in the month of August. The SCFI (Shanghai Containerized Freight Index) is now up by +187% year-on-year. Crude oil tanker (VLCC - Very Large Crude Carrier) rates have decreased from \$25k/day to \$ 14k/day at month end, whereas product tanker rates (MR earnings) have softened further from \$27.4k/day to \$ 22k/day. VLGC (Very Large Gas Carrier) rates have increased from \$31.9k/day to \$ 51k/day at month-end and Capesize-Rates have increased solidly from \$20k /day to \$25k/day.

Fund Performance

The fund performance of both the USD as well as EUR denominated share classes were negative.

Within transportation the shipping long book had an overall negative contribution of -2,1%. Long positions in the crude/product/chemical, dry-bulk as well as offshore-supply segment contributed a negative -1.1%, -0.4% and -0.7% respectively. On the other hand, the short shipping book in the container and LPG segment had a neutral contribution of -0.3 and +0,3% respectively.

In the area of freight services, the short book had a positive contribution of +0.1% whereas long positions in other transportation segments had a negative contribution of -0.2%. On the other hand, long positions in aircraft manufacturing and financing had a positive contribution of +0.6%. Within the energy segment the long book in the utility sector had a positive impact of +0.5%. Long positions in the oil & gas and oil services segment had a negative contribution of -2.3% and the short book has added + 0,2%. Additionally, the fund's short position in other energy segments had a positive contribution of +0.8%.

The fund's long position in the LNG infrastructure company New Fortress Energy had the largest security specific performance impact of -1.2%. NFE had reported its Q2 earnings. Due to an early termination of power supply contract in Puerto Rico and ongoing project delays NFE will miss its earnings guidance for the year.

Overall hedging positions via short index futures have contributed negatively by ca. -0.1 % to the overall performance result.
